Amid consistent rise in deaths of pedestrians and cyclists, Punjab has taken the lead among the states and UTs to implement the 'right to walk' by making it mandatory for all road owning agencies, including the NHAI, to provide foot path and cycle tracks in all future expansion of roads and construction of new ones, reports **Dipak Dash**.

The state government has issued these directions following two court orders after PILs were filed at Punjab and Haryana HC and another in the Supreme Court.

As per a communication from Punjab chief secretary Vijay Kumar Janjua to Punjab government's traffic adviser, Navdeep Asija, "in future all expansions of existing roads and construction of new roads, a mandatory provision of cycle tracks and footpaths should be made by all road owning departments and agencies".

The letter sent last week added that all agencies such as the public works department, local bodies, NHAI and urban development departments have been instructed to prepare an action plan to construct footpaths and cycle tracks with a time frame and budget provision.

TIMES VIEW: The right to walk is a cool idea. Pedestrian walkways and cycle tracks must be built everywhere. However, we must also audit the existing tracks and examine their lacunae. For instance, such tracks are regularly invaded by motorbikes. That apart, pedestrian-only tracks often have huge gaps, which makes walking a dangerous exercise. In other words, the right to walk must be converted into a proper mission with every angle taken care of to make it a success.

Given below are two statements : One is labelled as Assertion (A) and the other is labelled as Reason (R).

Assertion (A) : Diagonal scale is very useful for large scale or cadastral maps.

Reasons (R) : It is possible to read upto $1/100^{\text{th}}$ part of a primary division in a diagonal scale.

In the light of the above statements, choose the most appropriate answer from the options given below :

- (1) Both (A) and (R) are correct and (R) is the correct explanation of (A)
- (2) Both (A) and (R) are correct but (R) is NOT the correct explanation of (A)
