Learning Characteristics

Some of the important characteristics of learning are as given below:

1. Learning is Unitary: It implies that the learner reacts as a whole person to the whole situation in a unified way. It means that the learner responds intellectually, emotionally, physically and spiritually at the same time. This attitude helps in the achievement of educational goals.

Development of skills: A skill is a learned activity that one develops through practice and reflection. It is the ability to perform a learned activity well and at will. Skill, as an ability to perform something, includes proficiency, competence, and expertise in the activity. Skill refers to learning psycho-motor behaviours required in the activities such as driving a car or swinging a tennis racket. The development of skills entails the following stages:

- a. Cognitive Stage:** Achieved through declarative knowledge
- b. Associative Stage:** Combining individual steps into larger units
- c. Automated Stage:** Where the whole procedure can be accomplished without much attention. In the last stage, the brain process shifts from reflective to reflexive.

Development of Attitudes: Attitude is a mental state held by an individual which affects the way that person responds to events and organizes responses. Attitudes are commonly held to have three essential components or dimensions:

- i. A Cognitive Dimension: Beliefs and rationalizations which explain the holding of the attitudes
- ii. An Affective Dimension: Emotional aspects of attitudes, such as likes, dislikes, feeling of distaste, and
- iii. A Conative or Behavioural Dimension which involves the extent to which the individual is prepared to act on the attitude that they hold.

- 2. Learning may be planned or unplanned
- 3. Learning can be active as well as passive
- 4. Learning is usually individual, but it can also be collectively generated in groups
- 5. Learning is treated both as a process and as an outcome; learning is a life-long process
- 6. Learning may be incremental—it may add cumulatively to the prior learning or transformation
- 7. Learning can be stimulated or triggered by any experience, failure, success, and anything else.
