**Read the following comprehension and answer the following questions:**

Language vary widely across regions, communities, and social groups. The variation is natural and reflects the diversity of human experience. Dialects are regional or social varieties of a language that differ in pronunciation, vocabulary, or grammar. Sociolinguists' study shows how factors such as age, gender, class, and geography influence the way people speak.

Language change is another important area of study. Over time, pronunciation shifts, new words are borrowed, and old forms disappear. These changes happen gradually as speakers interact with one another and adapt to new social and technological conditions. No language remains completely static; all languages evolve.

Linguists analyze these variations and changes without considering any dialect superior. Instead, they recognize each variety as systemic and rule-governed. Understanding language variation helps reveal patterns of identity, social structure, and cultural history.
