**Question Number : 65****Correct : 2 Wrong : -0.66**

The growth of bacteria (*Lactobacillus*) in milk leads to curd formation. A minimum bacterial population density of 0.8 (in suitable units) is needed to form curd. In the graph below, the population density of *Lactobacillus* in 1 litre of milk is plotted as a function of time, at two different temperatures, 25 °C and 37 °C.

Consider the following statements based on the data shown above:

- i. The growth in bacterial population stops earlier at 37 °C as compared to 25 °C
- ii. The time taken for curd formation at 25 °C is twice the time taken at 37 °C

Which one of the following options is correct?

- (A) Only i
- (B) Only ii
- (C) Both i and ii
- (D) Neither i nor ii
