Q.No: 7 **Read the following passage and answer the questions based on it:**

The idea of progress has always gone hand in hand with the evolution of human beings and the invention of technology. Each technological revolution has unearthed revolutionary changes that have rewritten the human experience in the past. From the invention of the printing press to the invention of the internet, technological breakthroughs have shaped the manner in which we live, work, and communicate. But with our arrival in an age of artificial intelligence, automation, and biotechnology comes a growing paradox: while these technologies offer unparalleled convenience and power, they also undermine tried-and-true social forms and erode the very notion of what it means to be human. Technological advances, first of all, have provided standards of living much better. Medical advances like gene editing and precision medicine hold the promise to cure diseases that were once thought incurable. Communication technology has made the world think alike in ways that people could not have imagined a couple of decades ago, with people able to work together across borders and cultures with relative ease. But the same technology has profound implications. Automation is taking away jobs for millions of people, particularly where human labor can be automated. The speed of innovation has left millions behind, and with it there is a feeling of disconnection, fear for the future. Secondly, our dependence on technology is creating basic questions regarding privacy, security, and freedom. As we introduce AI into everyday life, do we have to sit back and ask ourselves: are we Master of Technology, or is technology the master of us? The paradox of progress, then, is in its double-edged nature. On one hand, technology comes bearing answers to some of humankind's biggest problems, yet it also brings new issues that human beings must resolve in order to make progress mean a more just and sustainable tomorrow.

What is the main paradox introduced in the passage regarding technological advancements?

Technology always improves the quality of life

Technology eliminates all forms of labor

Technology offers convenience but also undermines social structures and the notion of being human

Technology solves all human problems without consequences
