### Comprehension:

Read the following passage and answer the questions :

Organized endeavors directed by people responsible for planning, organizing, leading and controlling activities have existed for thousands of years. The Egyptian pyramids and the Great Wall of China, for instance, are tangible evidence that projects of tremendous scope, employing tens of thousands of people, were undertaken well before modern times. The pyramids are a particularly interesting example. The construction of a single pyramid occupied more than 100,000 workers for 20 years. Who told each worker what to do? Who ensured that there would be enough stones at the site to keep workers busy? The answer to such questions is *managers*. Regardless of what managers were called at the time, someone had to plan what was to be done, organize people and materials to do it, lead and direct the workers, and impose some controls to ensure that everything was done as planned.

Another example of early management can be seen during the 1400s in the city of Venice, Italy, a major economic and trade center. The Venetians developed an early form of business enterprise and engaged in many activities common to today's organizations. For instance, at the arsenal of Venice, warships were floated along the canals, and at each stop materials and riggings were added to the ship. Doesn't that sound a lot like a car "floating" along an automobile assembly line while components are added to it? In addition to this assembly line, the Venetians also used warehouse and inventory systems to keep track of materials, human resource management systems to manage the labor force, and an accounting system to keep track of revenues and costs.

**Comprehension:**

Read the following passage and answer the questions :

Organized endeavors directed by people responsible for planning, organizing, leading and controlling activities have existed for thousands of years. The Egyptian pyramids and the Great Wall of China, for instance, are tangible evidence that projects of tremendous scope, employing tens of thousands of people, were undertaken well before modern times. The pyramids are a particularly interesting example. The construction of a single pyramid occupied more than 100,000 workers for 20 years. Who told each worker what to do ? Who ensured that there would be enough stones at the site to keep workers busy ? The answer to such questions is *managers*. Regardless of what managers were called at the time, someone had to plan what was to be done, organize people and materials to do it, lead and direct the workers, and impose some controls to ensure that everything was done as planned.

Another example of early management can be seen during the 1400s in the city of Venice, Italy, a major economic and trade center. The Venetians developed an early form of business enterprise and engaged in many activities common to today's organizations. For instance, at the arsenal of Venice, warships were floated along the canals, and at each stop materials and riggings were added to the ship. Doesn't that sound a lot like a car "floating" along an automobile assembly line while components are added to it ? In addition to this assembly line, the Venetians also used warehouse and inventory systems to keep track of materials, human resource management systems to manage the labor force, and an accounting system to keep track of revenues and costs.

**Q.57** Given below are two statements : one is labelled as **Assertion (A)** and the other is labelled as **Reason (R)**.

**Assertion (A)** : Additive model considers the total of various components resulting in the given values of the over all time series and it is stated as :

$$Y = T + C + S + I$$

**Reason (R)** : Multiplicative model assumes that the various components interact in a multiplicative manner to produce the given values of the over all time series and can be stated as  $Y = T \times C \times S \times I$

In the light of the above statements, choose the **most appropriate answer** from the options given below :

- (1) Both **(A)** and **(R)** are correct and **(R)** is the correct explanation of **(A)**
- (2) Both **(A)** and **(R)** are correct but **(R)** is **not** the correct explanation of **(A)**

**Q.108** Given below are two statements : one is labelled as **Assertion (A)** and the other is labelled as **Reason (R)**.

**Assertion (A)** : Flooding in rivers could happen in the event of dams failure or ice blocking in the course of the river, as well as when snow melts rapidly.

**Reason (R)** : Flood way is a part of flood-prone area that usually has high velocities, high potential for soil erosion and high exposure to flow of significant quantities of debris where only critical infrastructure such as bridges is to be allowed.

In the light of the above statements, choose the **most appropriate answer** from the options given below :

- (1) Both **(A)** and **(R)** are correct and **(R)** is the correct explanation of **(A)**
- (2) Both **(A)** and **(R)** are correct but **(R)** is **not** the correct explanation of **(A)**

**Q.113** Given below are two statements : one is labelled as **Assertion (A)** and the other is labelled as **Reason (R)**.

**Assertion (A) :** The movement of air takes place from the high pressure to low pressure due to variation in pressure gradient. The convergence of air develops cyclones. The divergence of air develops anti cyclone.

**Reason (R) :** The air in the high pressure is denser than the air in the low pressure, the denser air occupies the place of less denser air.

In the light of the above statements, choose the **most appropriate answer** from the options given below :

- (1) Both **(A)** and **(R)** are correct and **(R)** is the correct explanation of **(A)**

Read the following passage and answer the questions :

In India, more than 58.6% of the landmass is prone to earthquakes, over 40 million hectares (12%) of its land is prone to floods and river erosion; about 5,700 km, out of the 7,516 km long coastline is prone to cyclones and tsunamis; 68% of its cultivable area is vulnerable to droughts; hilly areas are at risk from landslides and avalanches. However, there are risk due to manmade disasters also. Disaster risks can be further compounded by vulnerabilities related to changing demographics, poor socio-economic condition, unplanned urbanization, haphazard construction within high-risk zones, environmental degradation and poor management of natural resources, climate change, epidemics and pandemics. National Disaster Management Authority (NDMA) has put together this 'National Guidelines on Temporary Shelters for the Disaster-Affected Families.' The document provides guidance to states to develop a systematic intermediate shelter response programme. These guidelines give early recovery framework, for use in post-disaster situations and it will help primarily to government officials from various disaster management authorities, technical, professionals, including engineers, architects and planners working in housing related agencies. Civil Society Organisations (CSO), Non-Governmental organisations (NGOs) and Private Sector involved in humanitarian and shelter response after disasters. The Guidelines are based on understanding that intermediate shelters are important not only for more effective planning of permanent housing but are critical for early recovery of daily livelihoods and recovery of their socio-cultural life. Intermediate shelters can set direction for long-term housing recovery. This document includes principles, implementation arrangements, roles and responsibilities, to ensure social inclusion.

Read the following passage and answer the questions :

The Sustainable Development Goals (SDGs), adopted by all United Nations States in 2015 as part of the 2030 Agenda for Sustainable Development, represent a universal call to action to end poverty, protect the planet, and ensure peace and prosperity for all people. The 17 goals and 169 targets are interconnected, addressing critical issues such as poverty alleviation, zero hunger, quality education, gender equality, clean water and sanitation, affordable clean energy, decent work, reduced inequalities, and climate action. These goals balance the three dimensions of sustainable development: economic growth, social inclusion, and environmental protection. The SDGs emphasize inclusivity, leaving no one behind, and highlight the urgent need for global partnerships among governments, civil society, private sectors, and communities. For instance, Goal 13 on climate action calls for immediate steps to combat climate change and its impacts, while Goal 4 focuses on equitable, inclusive, and quality education. Achieving these goals requires strong institutional mechanisms, financing, innovation, and cooperation at local, national, and global levels. Progress on one goal often influences others, reflecting their integrating nature. Although significant advances have been made, challenges remain in areas such as poverty reduction, climate resilience, and reducing inequalities. There, the SDGs act not only as guiding principles but as measurable benchmarks for nations striving for sustainable futures.
