Comprehension:

Read the following paragraph and answer the questions :

Over-eating is one of the most surprising practices among those who think they can afford it. In fact, authorities say that nearly all who can get as much as they desire, over-eat to their disadvantage. This class of people could save a great amount of food by missing one meal per week and at the same time they could improve their health. A heavy meal at night, the so-called 'dinner', is the fashion with many and is often taken shortly before retiring to bed. It is unnecessary and could be forgone, not only once a week but daily without loss of strength. Three to five hours are needed to digest food. While sleeping, this food not being required to give energy for work, is in many cases converted into excess fat, giving rise to excess weight. The evening meal should be light, taken three or four hours before retiring. This prevents over-eating, conserves energy, and reduces one's expenditure on food.

Comprehension:

Read the following passage and answer the questions :

According to the IMF, between 2012 and 2019, after the global economic crisis and the waning of the impact of the immediate stimulus measures taken by the affected countries in its wake, global economic growth at constant prices averaged 3.4 percent. The growth rate was similar in the five-year period between 2014 and 2019. Between 2023 and 2028, the Fund's projected growth for the world economy is around 3.1 percent. Further, data from the World Trade Organization (WTO) show that, in value terms, world trade barely grew in either period (2012-19 or 2014-19). In volume terms, the growth rate averaged 2.4 percent. Despite this insipid backdrop for global economic growth and trade growth, between 2014 and 2019, the compounded annual growth rate of the Indian economy at constant price was 7.4%. In other words, these data demonstrate the internal strengths of the Indian economy, which bestow on it the ability to grow notwithstanding unfavourable global economic conditions. Therefore, it is eminently possible for the Indian economy to grow in the coming years at a rate above 7 percent on the strength of the financial sector and other recent and future structural reforms. Only the elevated risk of geopolitical conflicts is an area of concern. Priority areas for future reforms include skilling, learning outcomes, health, energy security, reduction in compliance burden for MSMEs, and gender balancing in the labor force. Furthermore, under a reasonable set of assumptions with respect to the inflation differentials and the exchange rate, India can aspire to become a USD 7 trillion economy in the next six to seven years (by 2030). This will be a significant milestone in the journey to delivering a quality of life and standard of living that match and exceed the aspirations of the Indian people.

Read the following passage and answer the questions :

According to the IMF, between 2012 and 2019, after the global economic crisis and the waning of the impact of the immediate stimulus measures taken by the affected countries in its wake, global economic growth at constant prices averaged 3.4 percent. The growth rate was similar in the five-year period between 2014 and 2019. Between 2023 and 2028, the Fund's projected growth for the world economy is around 3.1 percent. Further, data from the World Trade Organization (WTO) show that, in value terms, world trade barely grew in either period (2012-19 or 2014-19). In volume terms, the growth rate averaged 2.4 percent. Despite this insipid backdrop for global economic growth and trade growth, between 2014 and 2019, the compounded annual growth rate of the Indian economy at constant price was 7.4%. In other words, these data demonstrate the internal strengths of the Indian economy, which bestow on it the ability to grow notwithstanding unfavourable global economic conditions. Therefore, it is eminently possible for the Indian economy to grow in the coming years at a rate above 7 percent on the strength of the financial sector and other recent and future structural reforms. Only the elevated risk of geopolitical conflicts is an area of concern. Priority areas for future reforms include skilling, learning outcomes, health, energy security, reduction in compliance burden for MSMEs, and gender balancing in the labor force. Furthermore, under a reasonable set of assumptions with respect to the inflation differentials and the exchange rate, India can aspire to become a USD 7 trillion economy in the next six to seven years (by 2030). This will be a significant milestone in the journey to delivering a quality of life and standard of living that match and exceed the aspirations of the Indian people.

Read the following passage and answer the questions :

Over the one hundred years from 1950 to 2050, the world population was growing faster in the period 1962-1965, when it was increasing on average by 2.1 percent per year. The first billion in world population was achieved in 1804; by 1928, another billion was added; the third billion was added by 1960; the fourth by 1974; and the fifth by 1988. In 2000, the population had passed the 6 billion marks. By 2011, world had added another billion to the population. The dramatic change in the rate of growth is obvious. In 2020, for the first time since 1950, the rate of population growth declined below 1 percent annually, as per the estimates of UN, world prospectus report 2022, the world's two most population region in 2022 are Eastern and South-East Asia with 2.3 billion population (forming 29% of the world's population) Central and South Asia with the 2.1 billion population (forming 26% of the world's population). Sub-Saharan Africa will account for most of the growth of the world's population (The annual Growth rate of the population of sub-Saharan Africa peaked at 3% in 1978 and remained above 2.8% during the 1980s) over the coming decades, while several other regions will begin to experience decreasing population numbers. Whereas Europe and Northern America have reached the growth rate close to zero in 2020 and 2021.
